**Say “Hello” to a Member of the Westone Team**

Greg Morgan: Technical Support

We would like to introduce you to Greg Morgan, a member of our technical support team. Greg has been with Westone for nearly 24 years, and during that time he has been a lab tech, managed production labs and worked in our digital manufacturing department. If Greg looks familiar, it might be because he was a member of Westone’s “silent band.” While in the band he performed at trade shows around the world, demonstrating Westone’s music products to attendees. Greg is originally from Madison, Indiana, and prior to coming to Westone, Greg worked in factories, managed a Pizza House and served for 13 years in the United States Army as a weatherman (which brought him to the Colorado Springs area).

During his time away from Westone, Greg enjoys spending time with his family, camping and four-wheeling in his Jeep. Greg is also very passionate about traveling the world, as well as writing, recording and playing music with bands.

**Ditch Your Paper Order Forms for Good!**

Westone, the industry leader in custom-fit and universal-fit earpieces and clinical supplies for audiologists, is excited to introduce our new online ordering system. This new system is designed to improve the lives of hearing healthcare professionals everywhere by simplifying how they order earpieces—making the process quick, accurate, and convenient.

Make Westone your one stop shop for thousands of products!

Existing Westone account holders can go to [www.westone.com/earorder](http://www.westone.com/earorder). To activate a new Westone account, call Customer Service today at 800-525-5071. Westone dispenser account holders receive discounted pricing on most items!

**INTRODUCTORY OFFER**

**Receive a FREE pair of earpieces!**

With your first online order, include this coupon with your impressions.

Expires June 19, 2015. Valid only with original coupon. Must have Westone account to place order. Excludes electronic earpieces such as in-ear monitors and DefendEar digital products.

**An Additional Note on Hearing Protection for Sleep**

You may recall in our March, 2015 issue of this newsletter a discussion and our recommendations about sleep molds. We continue to have orders come in where our Otoblast™ material has been chosen. As we indicated in the previous article “any stiff material that would provide the greatest attenuation (like Otoblast™ Silicone) would be unacceptable from a comfort standpoint”. Therefore, to expedite your orders, we will substitute the softer, more comfortable W-1 Silicone material, as we have found that in 99% of the cases called on, this was willingly agreed to by the Dispenser.
